Enterprise Scale - Administer and Govern Fabric with Ease

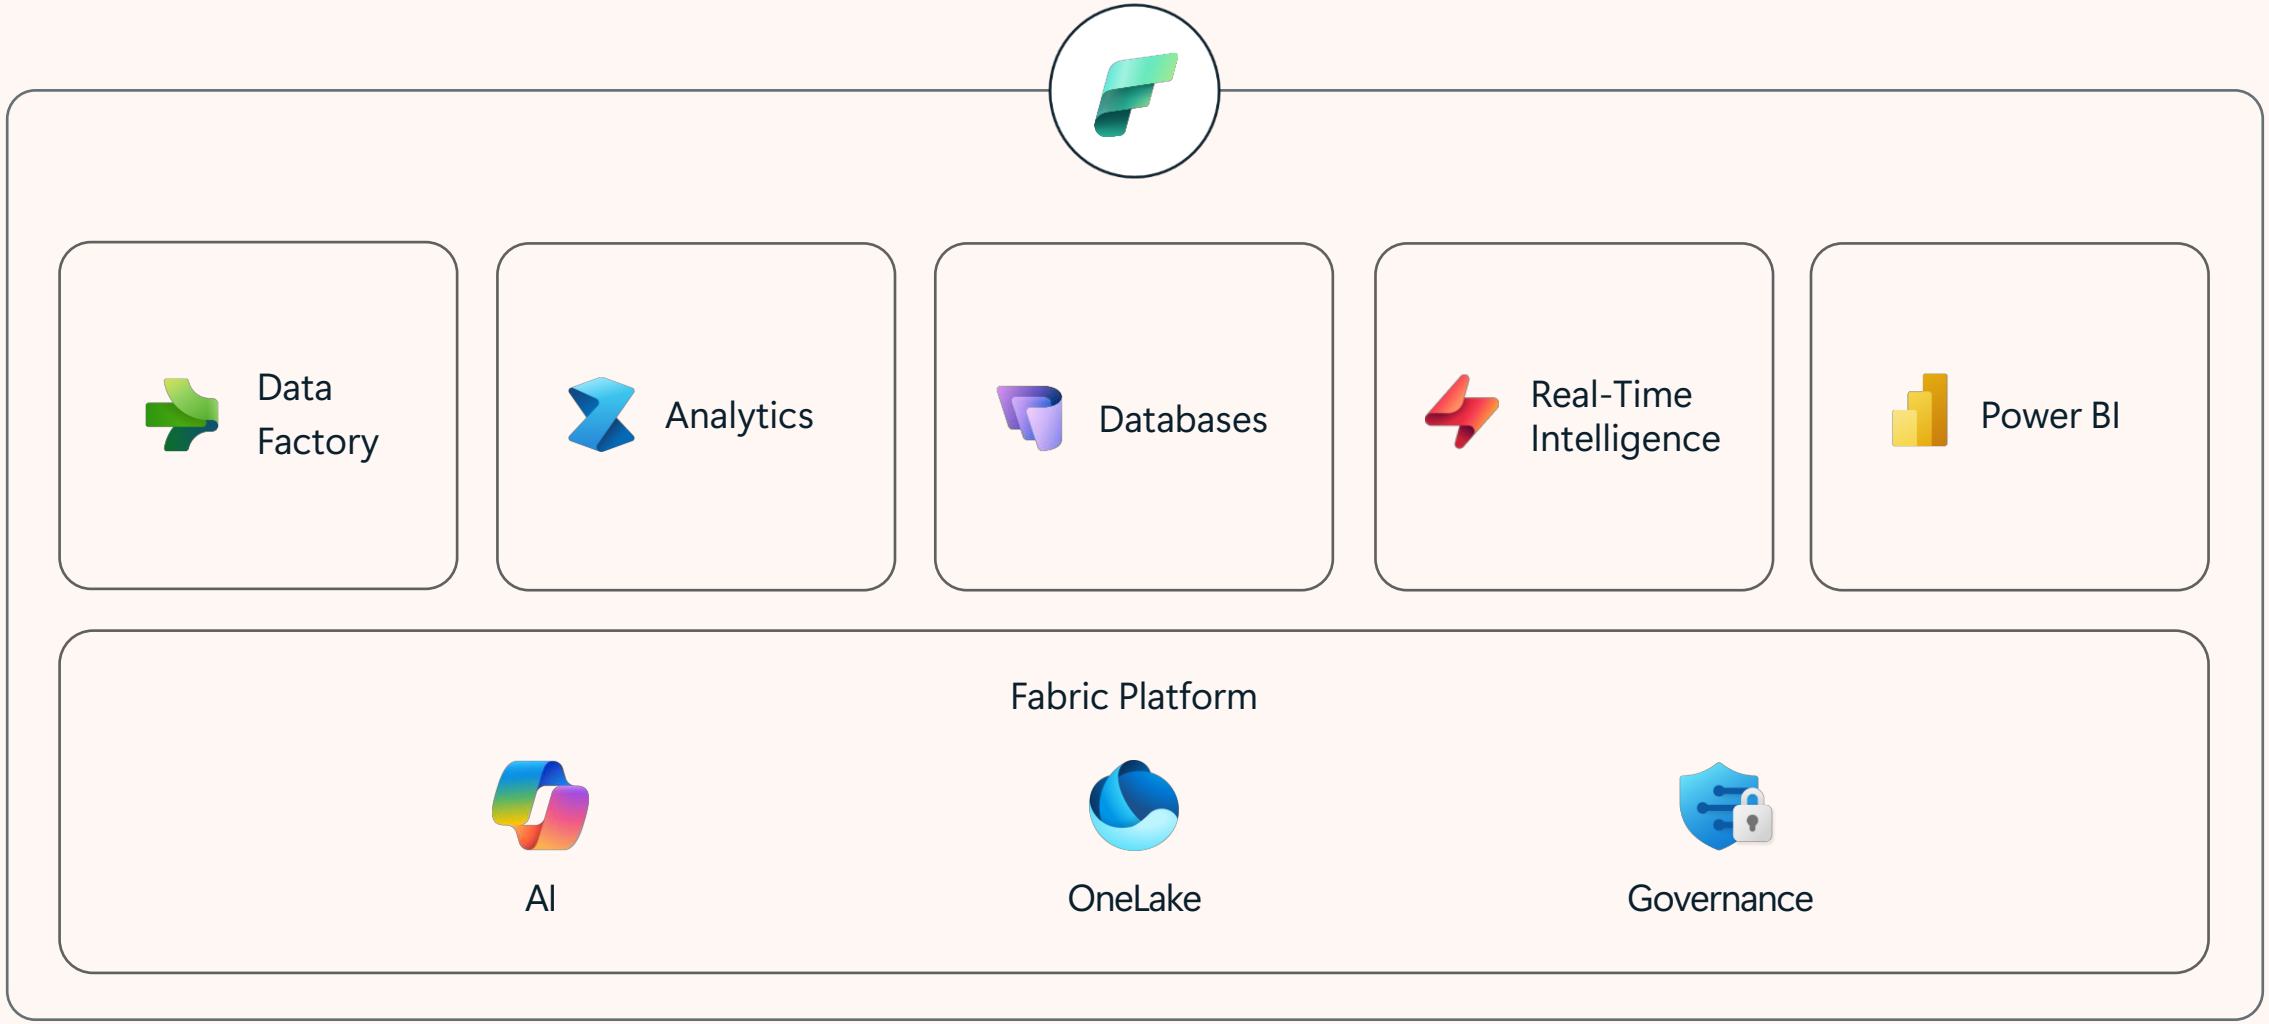

Varun Jain

Product Manager, Microsoft Fabric

//in/varunjain09/

Microsoft Fabric

The unified data platform for AI transformation

Agenda

01

Who are Fabric admins?

02

Admin tools in Fabric

03

Automating administration through Admin APIs

04

Tenant-level monitoring

Admin Users in Fabric

The governing agents

https://aka.ms/MSFabricAdminRoles

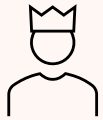

Admin Users in Fabric

The governing agents

Fabric
Tenant
Service Admins

- Full access to all management tasks
- Turn On/Off features
- Report on usage and performance
- Review and manage auditing
- Administering tenant settings

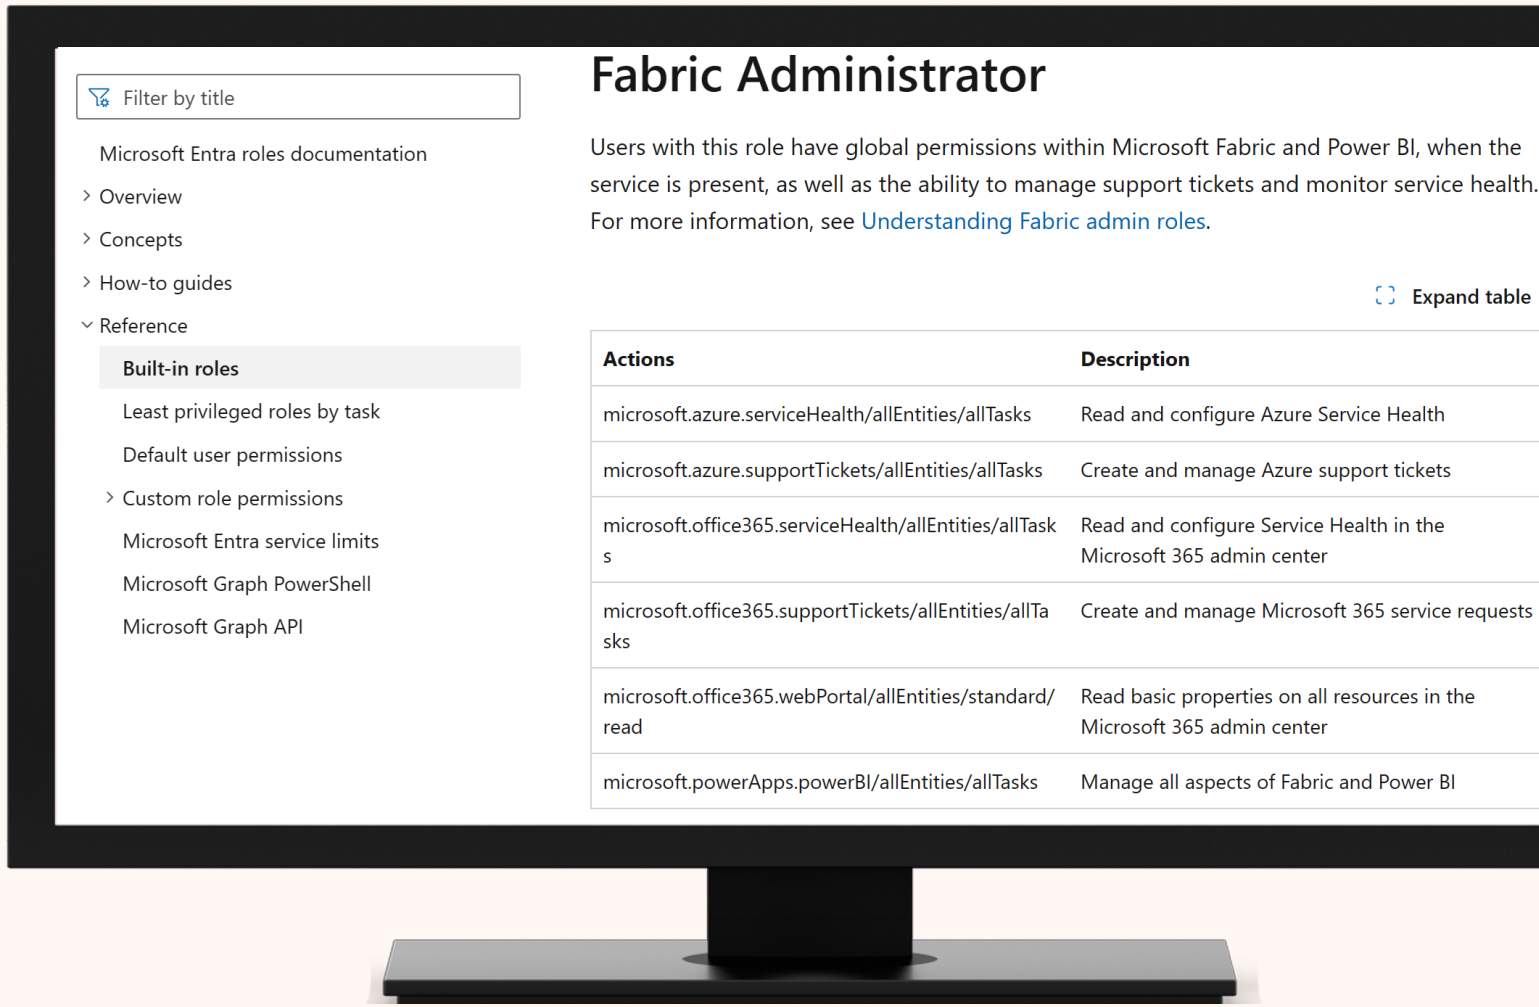

Who they are

Fabric admins
IT/system admins
CoE and BI Teams

Fabric Administrator Role in Microsoft Entra (prev. Azure AD)

- Power BI administrator role changed to Microsoft Fabric administrator role
- Fabric administrators are responsible for managing Fabric and all its workloads including Power BI

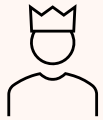

Admin Users in Fabric

The governing agents

Capacity Admins

- Assign workspaces to the capacity
- Manage user permission to the capacity
- Manage workloads
- Configure resource usage, auto-scale
- Restart the capacity
- Monitor capacity

Who they are

Capacity Creators

Assigned Admins

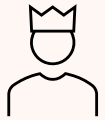

Admin Users in Fabric

The governing agents

Domain Admins

- Manage domains
- Define/update domain contributors
- Override some tenant settings
- Assign workspaces to domains
- Cannot delete the domain

Who they are

Business owners
Functional leaders
CDO orgs.

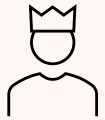

Admin Users in Fabric

The governing agents

Workspace Admins

- Manage user permissions
- Manage workspace configurations
- Configure Azure connections
- Enable monitoring

Who they are

Project Owners
Data Professionals
Data Engineers

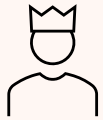

Admin Users in Fabric

The governing agents

Gateway Admins

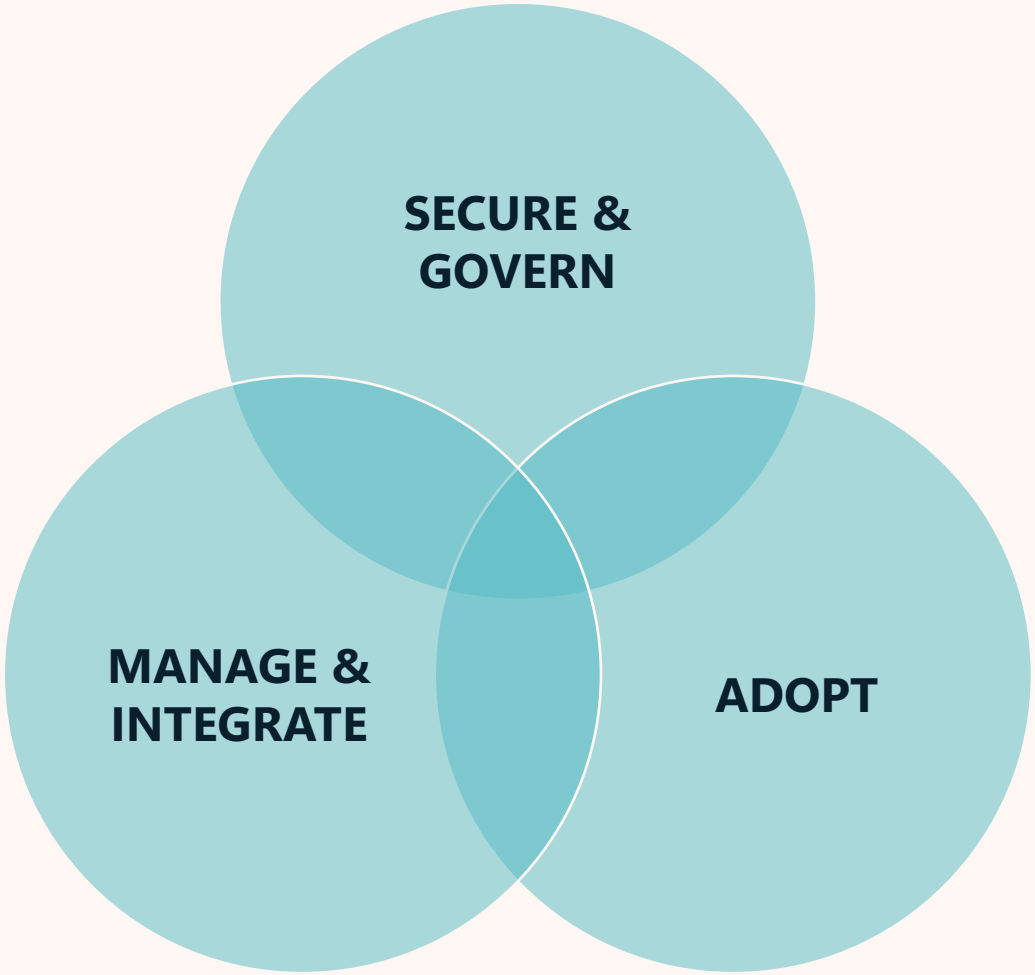

- Implement and manage gateways
- Manage data source connections
- Monitor gateways

Who they are

Tenant admins
Gateway admins
Data owners

What Fabric service admins do

Secure and Govern

- Manage and enable new features
- License usage and management
- General branding/theme guidelines
- Auditing & monitoring

Manage and Integrate

- Workspace creation
- Gateways and data sources
- Premium/Fabric capacity
- Integration w/ M365 apps
- Power Platform Integrations
- Power BI Desktop

Adopt

- Training users
- Fabric Adoption
- Fabric Community/Center of Excellence

Admin tools at your disposal

https://aka.ms/MSFabricAdminTools

- Fabric Admin Portal
- Microsoft M365 Admin Center
- Admin REST APIs
- Fabric Admin Monitoring Workspace
- Microsoft 365 Security and Purview compliance Portal
- Microsoft Entra ID in the Azure Portal
- PowerShell cmdlets
- External tools like DAXStudio, ALM Toolkit, Tabular Editor
- Fabric events in Real-time hub

Feature management

Reasons for tenant admins to control feature rollout:

- Application Testing and Adoption
  - Test features in a controlled environment before rolling out to all users
- Security and compliance
  - Workloads must be compliant with regulations such as GDPR, HIPPA, or industry specific standards
- Resource Management
  - Manage resource utilization to maintain platform performance
- Cost Management
  - Running the show within the organization’s budget

Feature/workload management at tenant level

- Tenant setting
  - Only tenant admins can control. Favors centralized control at the tenant level
- Settings delegable to domains/capacities/workspaces
  - Tenant admins can control the setting.
  - Domain/Capacity/Workspace admins may be allowed to override
- Settings that are automatically delegated
  - Tenant admins sets the default recommended by the org. Domain/Capacity admins will have the options to override
- Workspace settings
  - Tenant admins can add themselves to any workspace in an admin role and change workspace-level settings

Microsoft Fabric
Community Conference

Admin Notifications

What are admin notifications?

Notify Microsoft Fabric tenant admins on feature changes, breaking updates, or broader changes that impact tenant-level policies and ability for admins to effectively administer their Fabric tenant

Some common scenarios:

- Changes that require admin call-to-action (e.g., enforcing item limits)
- Changes that do not follow standard policies (e.g., default setting values)
- Ad-hoc scenarios (e.g., impact due to state change)
- Retirements and deprecation (e.g., feature retirements)
- Billing activations (e.g.,

Admin REST APIs

Automating Administration Using Admin APIs

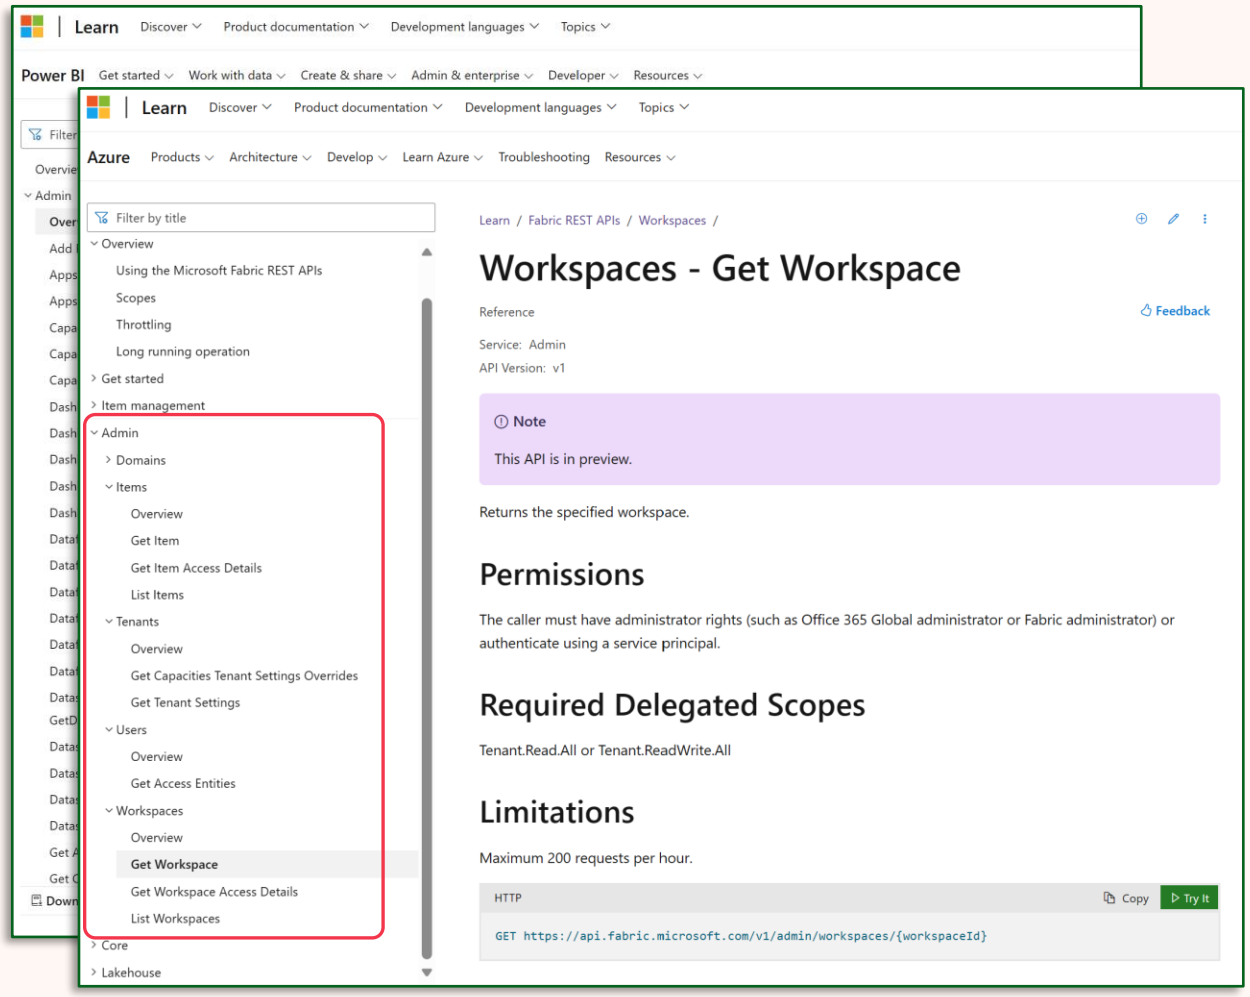

These APIs are typically used to

- Gain insights programmatically
  - ✓ Examples : GetGroups, GetGroupUsers, GetDashboards, GetDashboardUsers, etc.
- Policy enforcement through automation
  - ✓ Examples : UpdateGroup, DeleteUser, SetLabels, etc.

Fabric REST APIs: what's available

- Workspace
  - GetWorkspace / ListWorkspaces
  - GetWorkspaceAccessDetails
  - RestoreWorkspace
- Items
  - GetItem / ListItems
  - GetItemAccessDetails / GetAccessDetails
- Users
  - GetAccessEnitities
- Domains
  - Create/List/Update/Delete Domains
  - RoleAssignment
- Tenant Settings
  - ListTenantSettings
  - ListCapacityTenantSettingOverrides

Proactive governance using Scanner APIs

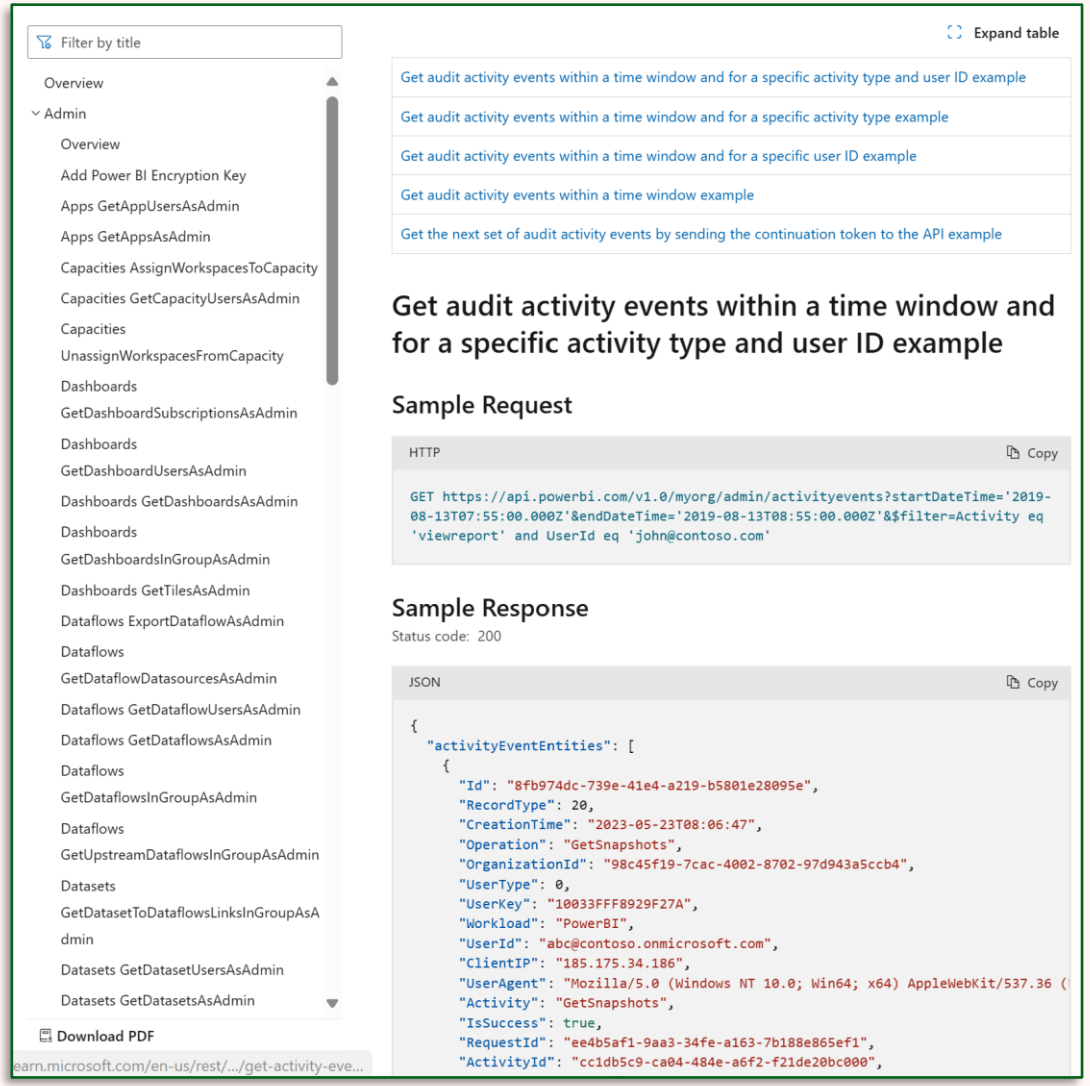

- Read-only APIs used to scan full metadata including item identity, owner, workspace, sensitivity label, endorsement, lineage, etc.
- Robust enterprise capabilities like authentication using service principal and incremental scans
- Main use cases
  - ✓ **Inventory Management**: Discover and catalog Fabric workspaces and items
  - ✓ **Security and Compliance Auditing**: Scan and analyze access permissions, sharing settings, and compliance status.
  - ✓ **External Integration**: Used for 1st party and 3rd party governance tool integration

Tracking all activities using GetActivityEvents API

Designed for Fabric Admins to track user activities for governance and management purposes. Main use cases are,

- Audit and compliance tracking
- Security Monitoring
- Usage and Adoption Insights
- Optimization and Cost Management

Service principal support for Admin APIs

- Fabric Admin APIs now support authentication using a Service principal (SPN) or Managed identities (MI).
  - **Note**: Not all Power BI v1 Admin APIs support SPN currently
- This allows applications to authenticate and access APIs without relying on user identities.
- This method enhances security by avoiding the use of personal credentials in automated processes and enables better integration with existing enterprise systems.
- It is particularly useful for scenarios that require automated, secure, and scalable integration with services.

Admin Monitoring

Admin Monitoring Workspace

Delivers curated insights that help you better manage, administer and govern your tenant.

Some examples:

- Feature Usage and Adoption
- Purview Hub
- Content Sharing

*Roadmap items

Why Admin monitoring?

Analyze adoption efforts

Understand usage patterns

Perform audit checks

Educate and support users

Mitigate risk

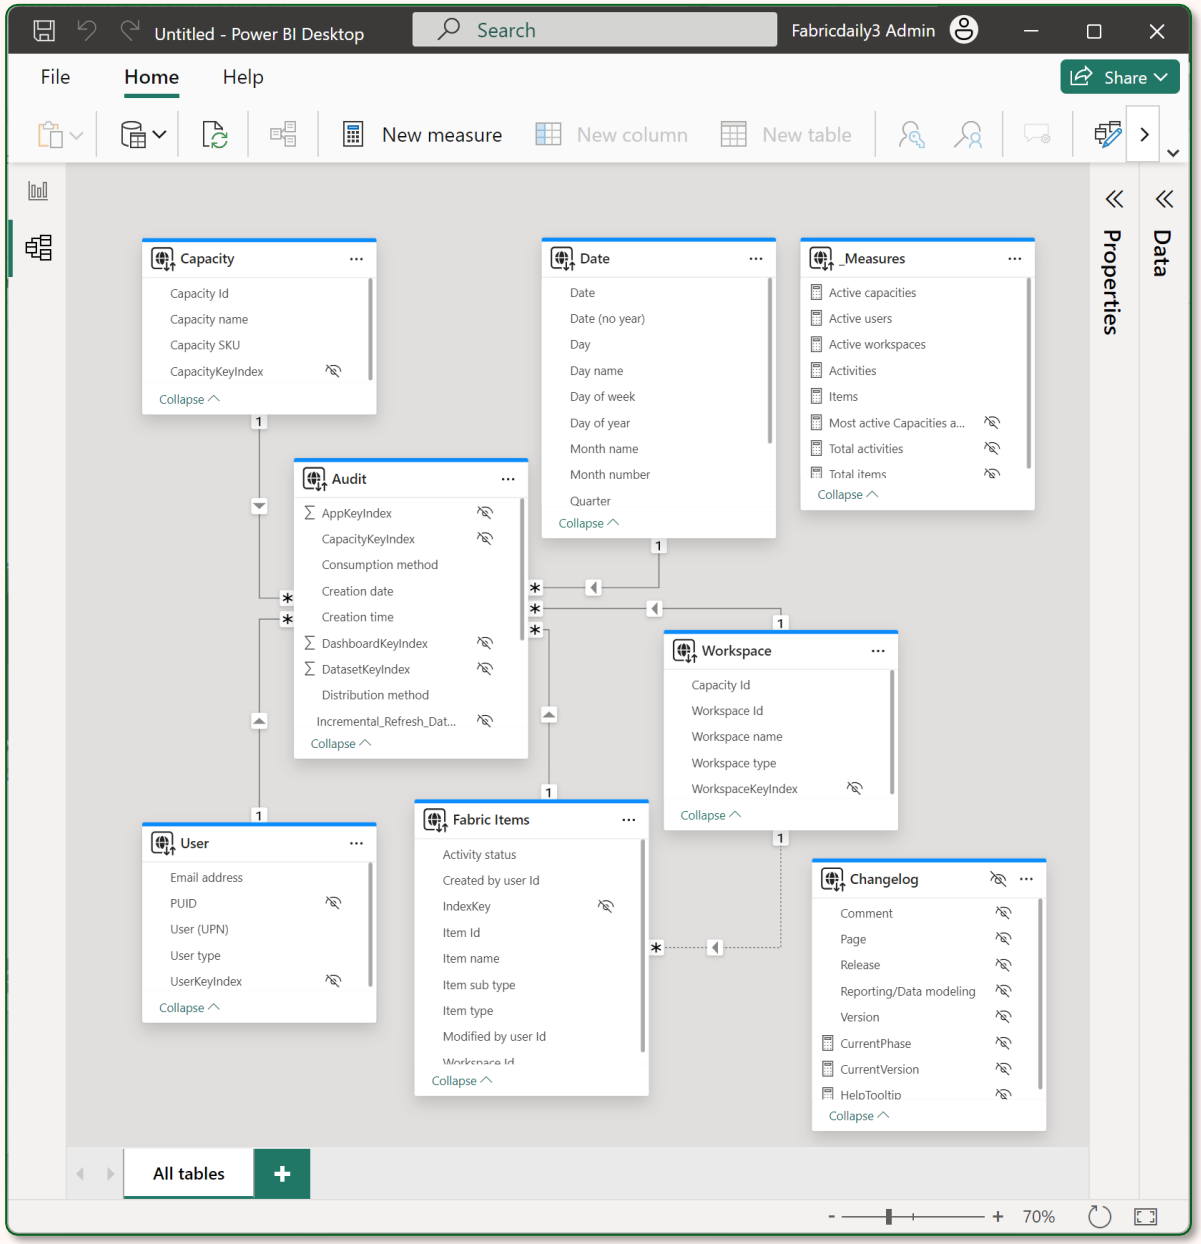

Improve compliance

Manage licenses and associated costs

Data model

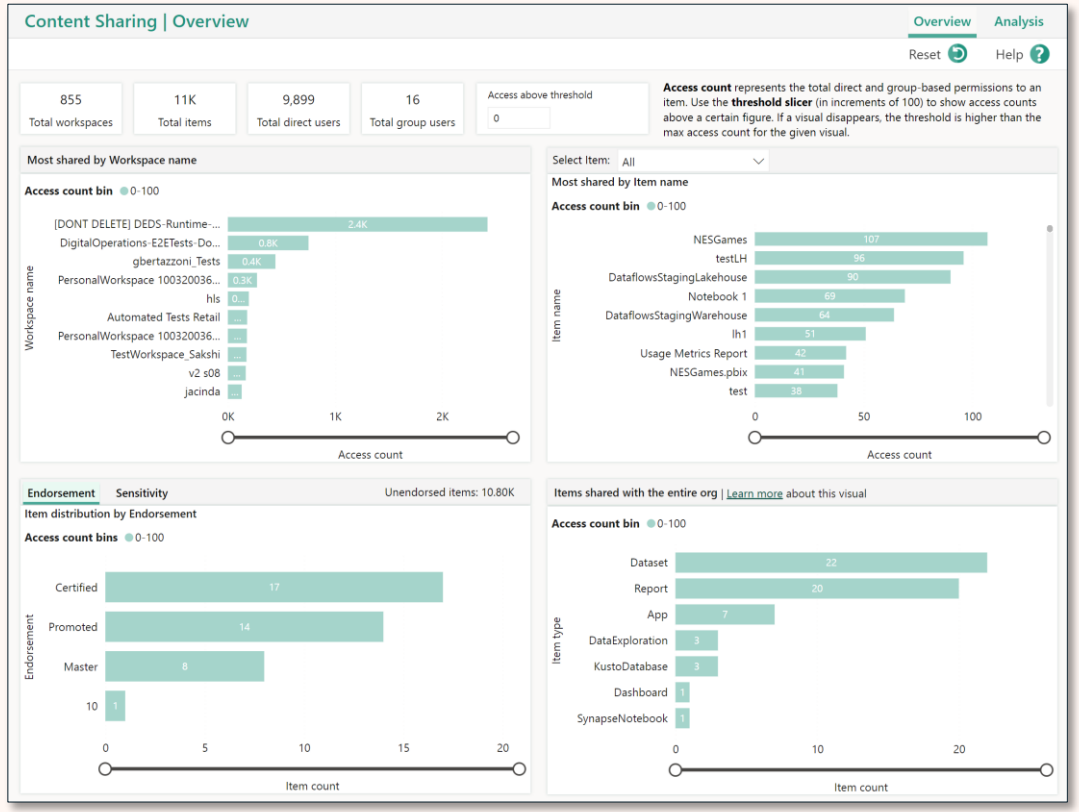

Data model is reusable and extendable for custom reporting

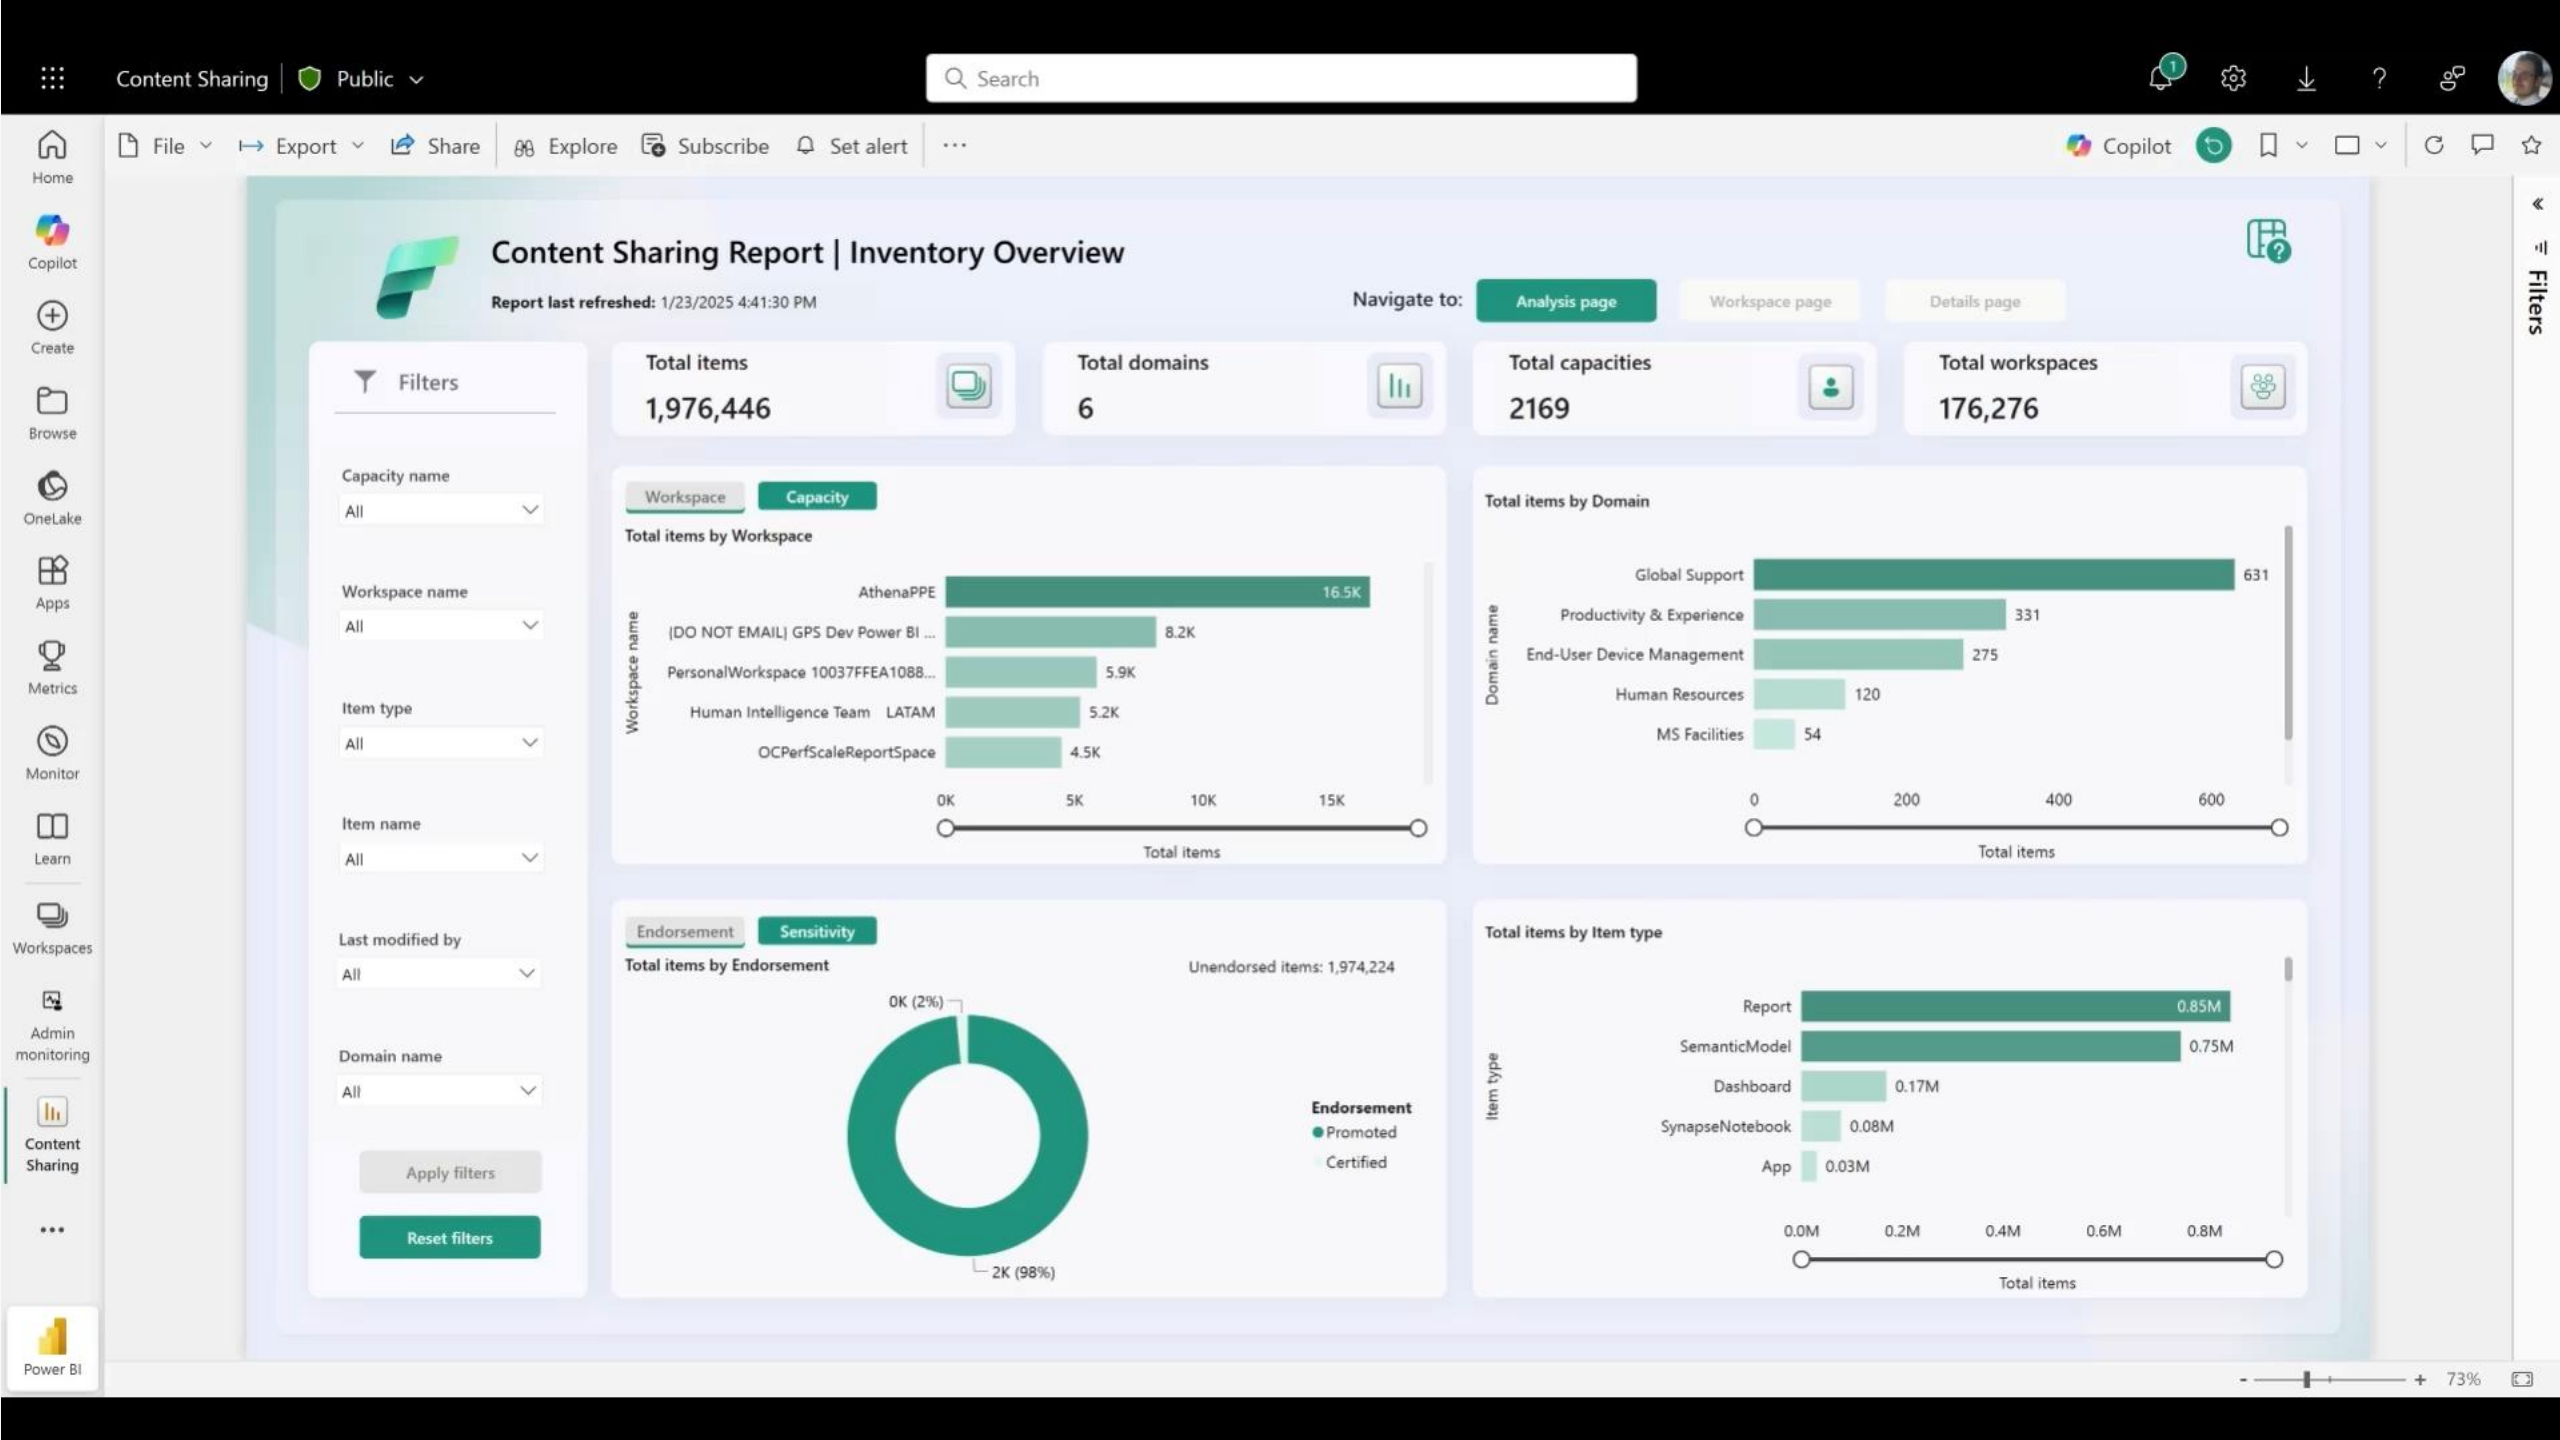

Announcing Content sharing (public preview)

Inventory management

- Spotlight items with access counts above a specific threshold
- Highlight workspaces with the most heavily shared items
- Understand how items are distributed by endorsement and sensitivity label
- Break down item access counts by direct and group membership
- Highlight items shared with the entire organization via links

What’s in our roadmap?

What’s Available Now?

- Admin APIs
  - ✓ Update tenant settings
  - ✓ List overrides at domain, workspace
  - ✓ Incremental SPN Support for Fabric APIs
  - ✓ List overrides at capacity level
  - ✓ Delete capacity tenant setting override
  - ✓ Update capacity tenant setting override
- Admin Portal
  - ✓ Federated control through delegation
  - ✓ Admin notifications and visual cue
- Admin Monitoring
  - ✓ Content Sharing (public preview)
  - ✓ Usage Insights (private preview)
  - ✓ Enhanced Feature Usage and Adoption report

What’s coming?

- Admin APIs
  - Improved performance
  - More Admin APIs
- Admin Portal
  - More delegated settings
  - Improved usability
- Admin monitoring
  - New reports
  - Enhancing existing reports – More dimensions, deeper analysis
  - Continued consolidation in admin monitoring – Capacity metrics, Workspace Usage Metrics
